BIO F242 Introduction to Bioinformatics

Experiment - 3

Name: Suchismita Tripathy ID: 2019A7PS0554P

Gene Name : HUS1 Checkpoint Clamp Component (HUS1)

 $transcript\ variant\ X1$

Organism : Theropithecus gelada Accession Number : $XM_025380797.1$

14 February, 2022

1 Aim

To predict the functional (Exons) and structural (Introns, TFBS, Promotor) regions in given gene sequence of Theropithecus gelada HUS1 Checkpoint Clamp Component (HUS1) transcript variant X1 using GENSCAN FGENESH

2 Materials Required

GENSCAN, FGENESH, gene sequence of Theropithecus gelada HUS1 Checkpoint Clamp Component (HUS1) transcript variant X1

3 Procedure

- 1. Open the home page of NCBI and retrieve the Theropithecus gelada HUS1 Checkpoint Clamp Component (HUS1) transcript variant X1 gene sequence in Fasta format having "Accession No" (XM_025380797.1).
- 2. Open the home page of GenScan (http://hollywood.mit.edu/GENSCAN. html) and FGENESH (http://www.softberry.com/berry.phtml?topic=fgenesh&group=programs&subgroup=gfind) respectively and analyze the given gene sequence.
- 3. Select the parameters such as like organism, exon cutoff, print options etc in both Genscan and FGENESH.
- 4. Take appropriate screenshots of observations.
- 5. Analyze the results.

4 Observations

```
        GENSCAN Output

        View gene model output: PS | PDE

        GENSCAN 1.0 Date run: 12-Feb-122 Time: 04:45:54

        Sequence /tmp/02_12_22-04:45:54.fasta: 3031 bp: 43.68% C+G: Isochore 2 (43 - 51 C+G%)

        Parameter matrix: HumanIso.smat

        Predicted genes/exons:

5 Interpretation of Results

The given gene sequence of Theropithecus gelada HUS1 Checkpoint Clamp Component (HUS1) transcript variant X1 consists of:

3031 bp in length

43.61% C+G

2 number of Isochore

1 number of genes

- **0** number of Init = Initial exon (ATG to 5' splice site)
- **0** number of Intr = Internal exon (3' splice site to 5' splice site)
- **0** number of Term = Terminal exon (3' splice site to stop codon)
- 1 number of Sngl = Single-exon gene (ATG to stop)
- **0** Length of longest Prom = Promoter (TATA box / initation site)
- **6** Length of longest PlyA = poly-A signal (consensus: AATAAA)
- **500** Maximum CodRg: coding region score (tenth bit units)
- **0.885** Maximum P : probability of exon (sum over all parses containing exon)
- 280 Length of Longest Amino Acid

Paste the Sequence of Longest Amino Acid:
